

UDAPEOPLE

Benefits of implementing CI/CD

Benefits of implementing CI/CD

- Quickly feature changes and fast feedback cycles
- Reduce complexity and failure rates
- Resolve technical problems and recover from failure faster
- Improve efficiency and collaboration across teams

Feature changes & feedback cycle

- The key rule of any feedback cycle technique is “shorten, and often”!
- Keep your customers happy with fast turnaround of new features and bug fixes.
- Usability improvements and overall customer satisfaction.
- Adding new features based on the way your customers use the product will help you retain current users and gain new ones.

Reduce complexity and failure rates

- Low Change failure rate
- Small code changes and easy detection of fault isolation.
- Find and fix failure with Application Monitoring.
- Smaller backlog for your team

Technical problems & recover from failure

- Faster Mean Time To Resolution (MTTR).
- Easy maintenance and updates.
- Developers spent more time on product development.

Efficiency & Collaborations

- Increases the transparency between teams.
- Encourages responsible accountability.
- Increased productivity.
- Satisfaction of making a daily impact.
- Continuous learning.
